

Array #2

Leetcode #1295 ✓

Find Numbers With Even Number of Digits ✓

<https://leetcode.com/problems/find-numbers-with-even-number-of-digits/description/> ✓

Given an array `nums` of integers, return how many of them contain an even number of digits

Example 1:

Input: `nums = [12, 345, 2, 6, 7896]`

Output: 2

Example 2:

Input: `nums = [555, 901, 482, 1771]`

Output: 1

Constraints:

$1 \leq \text{nums.length} \leq 500$

$1 \leq \text{nums}[i] \leq 10^5$

Companies:

Amazon, Quora, Adobe

Approach 1:

Check number of digits by dividing it by 10

$$7329 / 10 = 732 \quad \text{1}$$

$$732 / 10 = 73 \quad \text{1}$$

$$73 / 10 = 7 \quad \text{1}$$

$$7 / 10 = 0 \quad \text{1}$$

0

$$C = 1$$

Time complexity:

$O(n \cdot \log(\text{maximum number of digits in a number in array}))$

Space complexity:

$O(1)$

n.

$$k+1$$

$$\text{num} = a \cdot 10^k + b$$

$$\boxed{8999}$$

$$8 \times 10^3 + 999$$

$$10^{k+1} > \text{num} \geq 10^k$$

$$1 < \leq \frac{\log_{10}(\text{num})}{5} \leq k+1$$

10^4 $10^4 > \geq 10^5$
10000

Approach 2:
Convert num to string and get its length and then do modulo 2

$$7891 \rightarrow "7891" \rightarrow 4$$

len

Time complexity:
 $O(n \cdot \log(\text{maximum number of digits in a number in array}))$
Space complexity:
 $O(\log(\text{maximum number of digits in a number in array}))$

Approach 3: ✓
Convert num to string and get its length and then do modulo 2

$$10^0 = 1 \quad (nD = 1)$$

$$10^1 = 10 \quad (nD = 2)$$

$$10^2 = 100 \quad (nD = 3)$$

⋮

$$10^5 = 100,000 \quad (nD = 6)$$

$$10^5 = 6 \text{ digits}$$

$$k = 5 \quad \begin{array}{c} \boxed{100000} \\ 999999 \\ 100001 \end{array}$$

We can say that 10^k is the smallest integer with $k+1$ digits

$$10^k \leq \text{num} < 10^{k+1}$$

a number with $k+1$ digits

$$k \leq \log_{10}(\text{num}) < k+1$$

$\log_{10}(\text{num}) = k + 1$
 $\log_{10}(100) = 2$
 $\text{floor} \rightarrow 2$
 $\text{ceil} \rightarrow 2$
 $\log_{10}(999) = 2.9...$
 $\text{floor} = 2$
 $\text{ceil} = 3$
 $\text{res} + 1$
 $\text{res} // \text{res} - 1 //$

Time complexity:
 $O(n \cdot \log(\text{maximum number of digits in a number in array}))$
 Space complexity:
 $O(1)$

Approach 1:
 $1 \leq \text{nums}[i] \leq 10^5$

```

public boolean numberHasEvenDigits(int num) {
    int digitsCount = 0;

    while (num != 0) {
        num = num / 10;
        digitsCount++;
    }

    return digitsCount % 2 == 0;
}

public int findNumbers(int[] nums) {
    int evenCount = 0;

    for (int i = 0; i < nums.length; i++) {
        if (numberHasEvenDigits(nums[i])) {
            evenCount++;
        }
    }
}

```

```
        return evenCount;
    }

    public int findNumbers(int[] nums) {
        int evenCount = 0;

        for (int num : nums) {
            int len = String.valueOf(num).length();

            if (len % 2 == 0) {
                evenCount++;
            }
        }

        return evenCount;
    }

    class Solution {
        public int findNumbers(int[] nums) {
            int evenCount = 0;

            for (int num: nums) {
                int digitCount = (int) Math.floor(Math.log10(num)) + 1;

                if (digitCount % 2 == 0) {
                    evenCount++;
                }
            }

            return evenCount;
        }
    }

    class Solution {
        public int findNumbers(int[] nums) {
            int evenCount = 0;

            for (int num: nums) {
                int digitCount = (int) Math.floor(Math.log10(num)) + 1;

                if (digitCount % 2 == 0) {
                    evenCount++;
                }
            }

            return evenCount;
        }
    }
```
